

Database Visual ARCHITECT

Access Database with Object-Oriented Technology

Database Visual ARCHITECT (DB-VA) is the ideal development platform for automating the entire model-build-deploy process for all kinds of database applications. It is designed to efficiently handle databases of various sizes, ranging from standard-alone to enterprise applications. Among its features are small footprint, high performance, rapid development, easy deployment and flexible open architecture. Whether you would like to build your database applications in a clean and pure object oriented manner by performing static modeling using Class Diagram, or you would like to adopt a traditional ER diagram, DB-VA will streamline the entire process for you by generating ER diagram and database automatically based on Class Diagram or vice versa. Forget relational databases, tables, records, fields, SQL, JDBC and drivers, and start writing more effective database code using Java classes and objects. It will help to significantly reduce the amount of Java code that is normally needed to access a relational database.

Excel the Entire Development Process with DB-VA

Develop new database applications using pure object oriented approach through a simple automated development process; ERD and database will be created and keep always in-sync without hassle.

Create new databases automatically using most widely ERD and manipulate it through java classes and objects without any knowledge on database programming.

Migrate existing RDBMS to pure object applications with intuitive automated process by using smart wizard.

Sophisticated code Generator for generating semi-finish stand-alone and web applications for easy touching-up.

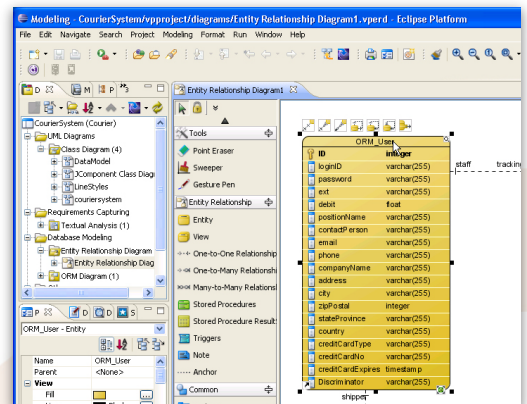

Key Benefits

- Affordable price starting at \$399
- Just knowledge of OOP. No JDBC or ODBC programming knowledge needed!
- Small library footprint and written entirely in Java (no hidden code)
- Intuitive GUI Design and supreme visual on-diagram editing capabilities
- Cross-platforms compatible with Windows, Linux, Unix and MacOS X
- Transparent mapping between application and relational databases
- Support wide-range of leading relational databases and effortless to switch applications from one database to other.

\$399

- Intuitive GUI design and supreme on-diagram visual editing capabilities
- Seamless integration for leading Java IDEs
- Perform requirements capturing and domain analysis with automated Textual Analysis tool
- Working together with Team Development Support
- Sharing your Design with Free-of-Charge Viewer
- Generate documents in popular formats (PDF, HTML and MS Word) with smart wizard.

About Visual Paradigm International

Visual Paradigm provides a suite of award-winning products that facilitates organizations to visually and diagrammatically design, integrate and deploy their mission critical enterprise applications and their underlying databases. Our award-winning products help your software development team to excel the entire model-build-deploy software development process, maximizing and accelerating both team and individual contributions.
