

How to Use Secondary Pools for BPMN Task?

Written Date : August 16, 2010

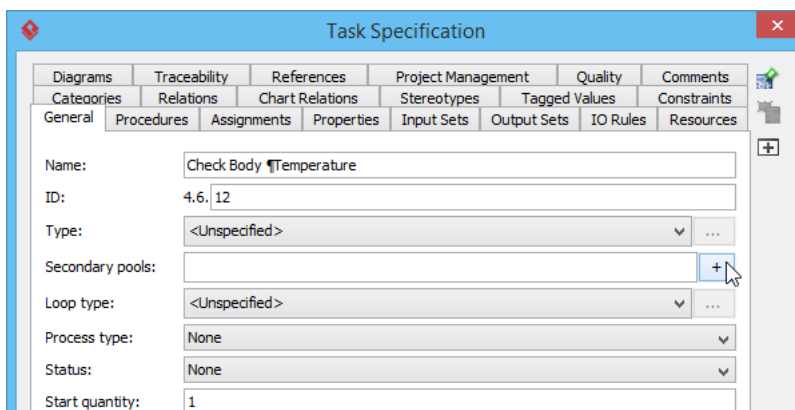

1. Download [Simple-Clinic.vpp](#). You can also find this file at the bottom of this tutorial.
2. Open the downloaded .vpp file in Visual Paradigm. To open a project, select **Project > Open** from the application toolbar.
3. Open the business process diagram *Patient Registration*.

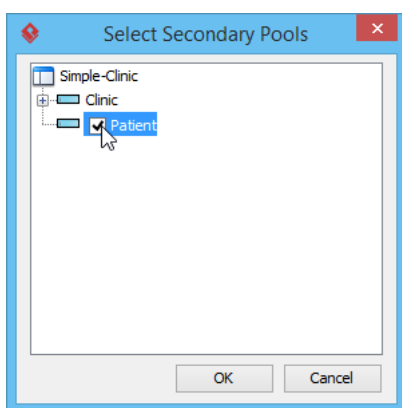

4. If you find the *Check Body Temperature* task can be done by either the nurse or the patient, you can assign a secondary pool to the task.
5. Right-click on the *Check Body Temperature* task and select **Open Specification...** from the pop-up menu to open the **Task Specification** window.

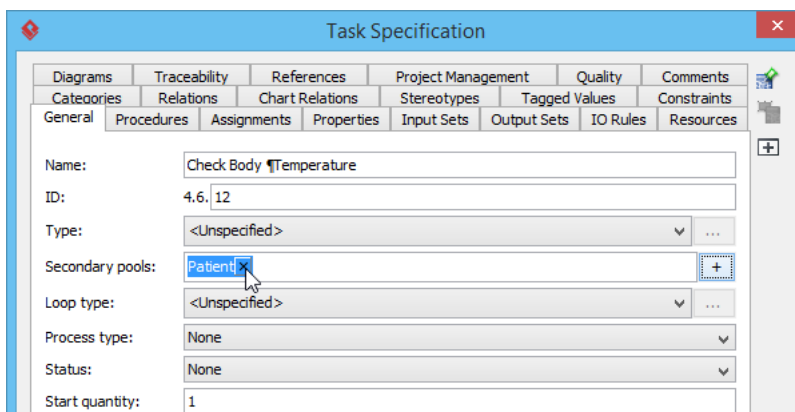

6. In the **Task Specification** window, open the **General** tab. Click the plus button next to **Secondary pools**.

7. The available pools are listed in the **Select Secondary Pools** window. Check the **Patient** pool and then click the **OK** button. Subsequently, click the **OK** button in the **Task Specification** window.

8. If you later decide that checking body temperature should be done by the nurse only, you can remove the *Patient* pool by clicking the small cross button next to it.
